

e2text.net

email to text

Instant desk-to-field communication

e2text.net email to text service links the desktop with the mobile phone instantly, securely and with minimal operating cost.

Text messaging is fast, cheap and easy to use. It's available on almost every handset and costs pennies to use. If you need to get a message to someone, it's often the quickest and cheapest method.

e2text.net email to text service allows you to link your desktop directly with any mobile using the software you're already familiar with. You send an email to the mobile and it's received as a text message. The mobile user can text back and you'll receive it as an email.

You don't need to install any special software, sign up for any service charge or make any changes to the way you already work.

- ▶ Send and receive emails instantly between PC and mobile phone
- ▶ Email messaging to any handset — any model, any network
- ▶ Send direct from your normal email client — no special software needed
- ▶ No service costs — pay only for messages sent
- ▶ No setup — runs from your existing system

send email to a mobile

and text to a PC

There are numerous occasions when you need to get a message to someone fast.

An appointment has changed... a meeting has been cancelled... an urgent new job has come up... a field operator needs directions... a customer's car is ready... a patient's prescription can be collected... a new property has come on the market and is ready for viewing...

e2text.net email to text service links the desktop with any mobile phone on any network. All you need to do is type your email into your normal email client—Microsoft Outlook or Outlook Express, Lotus Notes, Novell Groupwise and most others—and the email will appear on the recipient's mobile as a text message.

Then, if they need to reply, they simply enter their own text message and send it back to the number they received it from, and it will appear on your desktop as a new email.

e2text.net email to text service works with all GSM and GPRS mobile phones. If they've got a mobile capable of text messaging, you can email them direct. This means the service is ideal for field workers, sales teams and support crews, health and social workers —any occasion in which you need to get in touch with someone on the road.

What's more, the low cost of text messaging means that even your most urgent message is cost-effective. Your field workers don't need their laptop with them in order to keep in touch, and if it's you in the field, you just need to set up a forwarder on your office email address to get all your emails on your mobile, the instant they arrive.

Sending a text message by email is simplicity itself. All you need to do is set the **To:** or **Cc:** field of your email to the relevant mobile number followed by the e2text.net address in the format **<mobile no>@e2text.net**.

You can store this in your address book for instant recall.

Depending on the email client you use, you can send the same email to a group of up to 100 mobiles at once. You can send the message to any combination of desktop and mobile recipients.

You can do everything you normally do by email direct to a mobile.

benefits at a glance

- ▶ **Immediate** text-enabling of your entire organization
- ▶ No special software required
- ▶ No PC setup or permissions changes
- ▶ Messaging is instant and costs pennies
- ▶ No more missed calls or lengthy phone conversations
- ▶ Messages are sent discretely and securely
- ▶ Reach your recipient wherever they are
- ▶ No service charges
- ▶ Optional itemized billing

Sending email to text

- 1 Type the message as you would for a normal email.
- 2 Now enter or call up the recipient's address in the **To:** or **Cc:** field using the format **<mobile no>@e2text.net**. You can enter several addresses or send a group message to a larger number of mobiles.
- 3 Send your email! The recipient will receive it instantly as a text message.

Sending text to email

- 1 When you receive an email-to-text message, select 'Reply'. Your message will be sent to the last email address you received from.
- 2 Send your text message! The recipient will receive your email instantly from **<mobile no>@e2text.net**.
- 3 If the recipient wants to reply back, they simply select 'Reply' in their email client as normal.
